The research leading to these results has received funding from the Norway Grants 2014-2021 via the National Center for Research and Development

### Enhancing the user uptake of Land Cover / Land Use information derived from the integration of Copernicus services and national databases "InCoNaDa"

# WP5: LCLU for Environmental Monitoring Norway

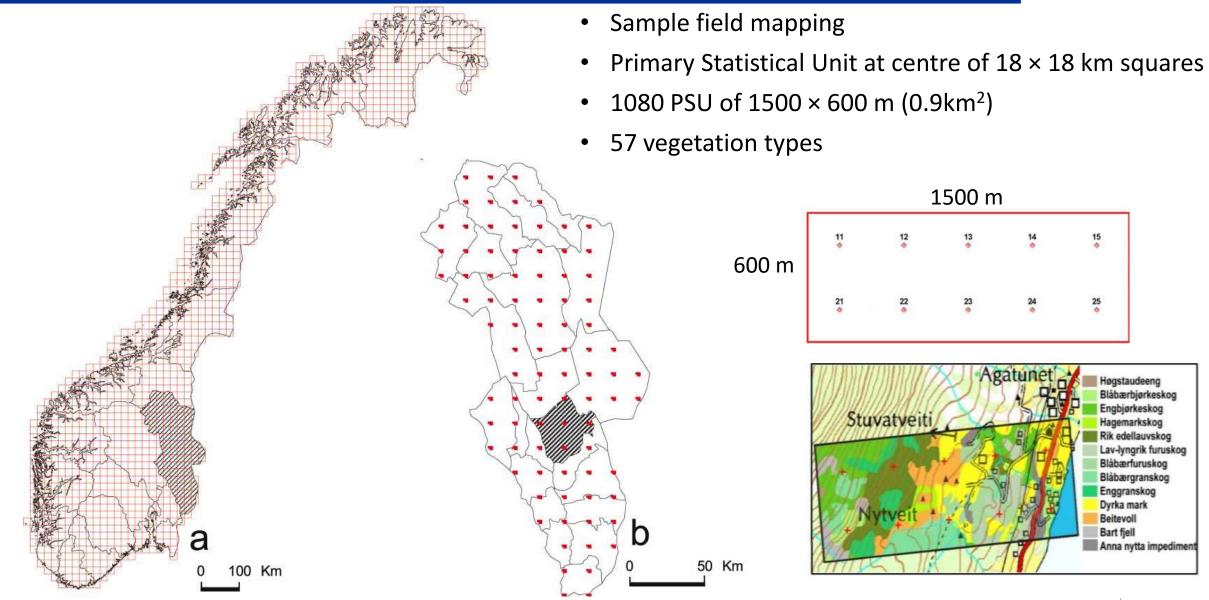

# WP5 Task 5.1 - HRL Water and Wetness

Exploring the potential of HRL WAW for peatland and wetland detection and monitoring

- Peatland and wetlands are important for biodiversity
- Organic soils store large amounts of carbon
- Many drivers of change (building/infrastructure, climate change, expanding bioeconomy, new cultivation, abandonment of outfield grazing...)
- Norway's National Land Resource Map (AR5) covers 60 % of the country primarily land below the treeline
- We do not have a good map of wetlands in the mountains

## Area Frame Survey for Norge - AR18 x 18

Kilde: Strand G.-H. 2013. The Norwegian area frame survey of land cover and outfield land resources. Norsk Geografisk Tidsskrift 67(1), p. 24-35.

# What does each WAW class comprise?

User's accuracy - how often is the class on the map actually present on the ground

	Dry	Permanent water	Temporary water	Permanent wetness	Temporary wetness	Sea water	Unclassi- fiable	Total
Built-up land	1.0	0.0	0.6	0.0	0.3	0.0	-	0.7
Farmland	3.5	0.0	0.1	3.6	5.0	0.0	-	3.6
Dry open land below the treeline	1.0	0.0	0.4	1.0	2.3	0.3	-	1.3
Damp heath/meadows below treeline	0.6	0.0	0.4	0.4	1.3	0.2	-	0.7
Alpine meadow communities	1.6	0.1	2.2	0.1	4.8	0.1	0.1	2.5
Alpine dry heath communities	13.7	0.4	10.9	1.2	40.4	0.0	2.7	20.8
Alpine damp heath	1.5	0.0	0.1	0.1	2.8	-	0.1	1.8
Forest	49.6	0.6	4.1	8.3	11.1	0.3	-	32.3
Peatland forest	5.3	0.1	0.3	13.2	2.2	0.0	-	3.8
Wetlands	3.8	0.5	3.6	67.0	19.5	0.0	-	8.5
Barren land, boulders, bedrock	10.4	0.8	15.1	0.0	2.1	0.8	60.5	7.7
Snow-bed vegetation	6.2	0.2	6.2	0.0	6.4	0.0	4.9	5.7
Glaciers and perpetual snow	0.3	-	-	-	0.0	-	30.3	0.6
Freshwater	1.0	97.4	55.9	4.6	1.6	0.0	1.5	5.2
Seawater	0.6	0.0	0.2	0.3	0.1	98.2	-	4.6
Total	100	100	100	100	100	100	100	100

# Which WAW classes do we find in each vegetation type?

Producer's accuracy - how often are real features on the ground correctly shown on the map

	Dry	Permanent water	Temporary water	Permanent wetness	Temporary wetness	Sea water	Unclassi- fiable	Total
Built-up land	83.8	0.3	0.2	0.0	15.6	0.1	-	100
Farmland	56.0	0.0	0.0	0.1	43.9	0.0	-	100
Dry open land below the treeline	44.2	0.0	0.1	0.1	54.8	0.8	-	100
Damp heath/meadows below treeline	45.1	0.1	0.1	0.1	53.6	1.0	-	100
Alpine meadow communities	37.5	0.1	0.2	0.0	61.9	0.2	0.1	100
Alpine dry heath communities	38.2	0.1	0.1	0.0	61.4	0.0	0.2	100
Alpine damp heath	48.9	0.0	0.0	0.0	51.0	-	0.1	100
Forest	89.0	0.1	0.0	0.0	10.8	0.0	-	100
Peatland forest	81.6	0.1	0.0	0.3	18.0	0.0	-	100
Wetlands	26.0	0.2	0.1	0.8	72.9	0.0	-	100
Barren land, boulders, bedrock	77.9	0.4	0.4	0.0	8.7	0.4	12.2	100
Snow-bed vegetation	62.9	0.1	0.2	0.0	35.4	0.0	1.3	100
Glaciers and perpetual snow	24.5	-	-	-	0.0	-	75.4	100
Freshwater	11.2	76.2	2.2	0.1	9.9	0.0	0.4	100
Seawater	7.5	0.0	0.0	0.0	0.7	91.8	-	100
Total	58.1	4.1	0.2	0.1	31.7	4.3	1.6	100

# Key points:

- Permanent water in WAW is usually correct ... but some water is missing (11 % in class 0)
- 67 % of permanent wet (class 3) is wetland
  ... but only 0.8 % of wetlands are classified as permanent wet
- 73 % of wetlands are classified as temporary wet
  ... but 26 % are classed as dry
- There seems to be too much temporary wet: over half of heath, meadows and other open dry land

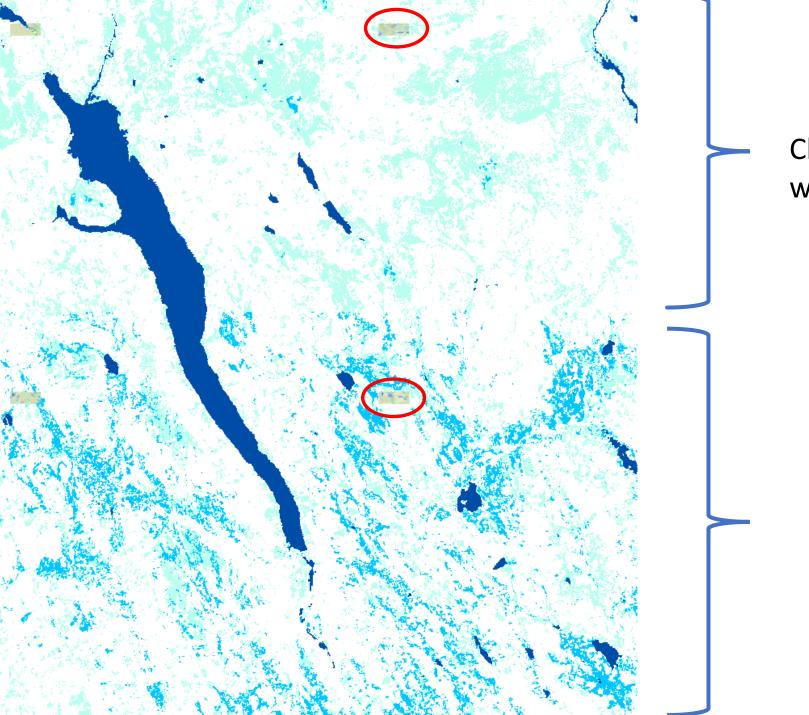

8.5 % of Norway is wetland, but only 0.1 % of HRL-WAW is class 3

# Little difference between wetland types

	Dry	Permanent water	Temporary water	Permanent wetness	Temporary wetness	Total	Area (km²)
Peatland forest	81.6	0.1	0.0	0.3	18.0	100	35.1
Damp forest	71.1	0.0	0.0	0.0	28.8	100	9.2
Bog forest	73.1	0.0	0.0	1.3	25.6	100	6.2
Poor swamp forest	88.8	0.1	0.0	0.3	10.8	100	15.0
Rich swamp forest	90.0	0.1	-	0.0	9.9	100	4.7
Wetlands	26.0	0.2	0.1	0.8	72.9	100	78.4
Bog	29.9	0.1	0.0	0.8	69.2	100	21.0
Deer-grass fen	19.8	0.0	0.1	2.4	77.7	100	6.5
Fen	25.1	0.1	0.1	0.5	74.2	100	48.0
Mud-bottom fen and bog	25.7	1.4	0.1	1.9	71.0	100	2.2
Sedge marsh	29.5	14.7	2.9	0.4	52.5	100	0.7

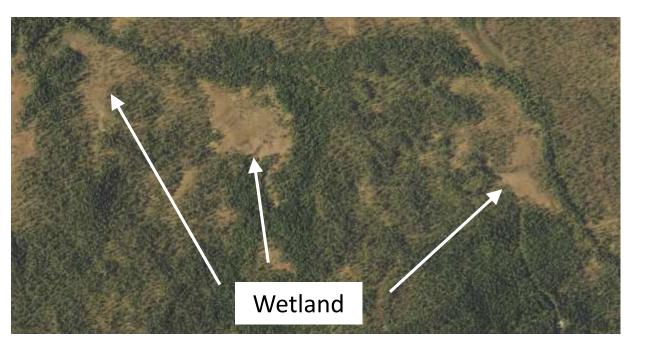

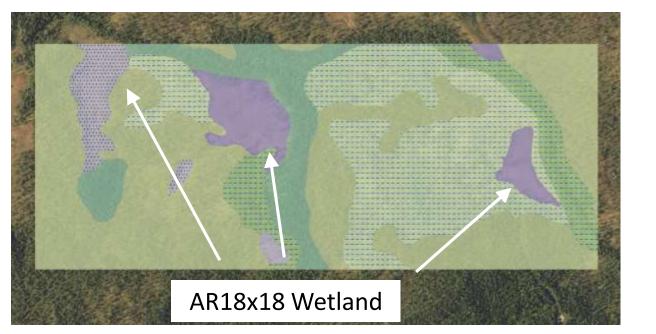

# Class 3, permanent wetland, is almost absent

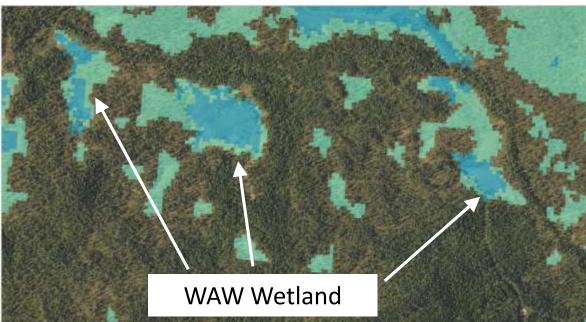

Class 3 is much more abundant in the lower part of the figure.

• In this area, rather good correspondence with class 3 in WAW

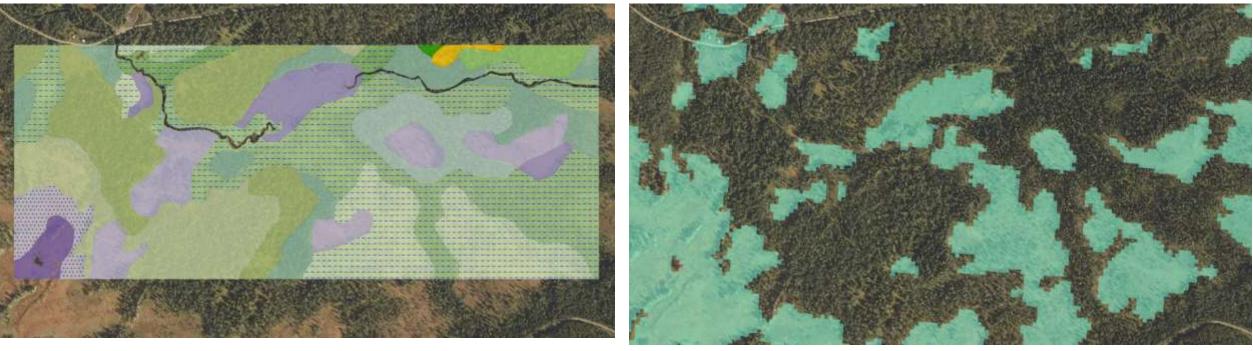

- Very similar landscape
- Bogs and fens
- Only temporary wet in WAW
- Class 3 is missing
- The river (class 1) is also missing

## WP5: LCLU for environmental monitoring

- We appreciate that definitions do not fully overlap, nevertheless...
- A third of Norway is classified as Temporary Wet this is too much (to be useful)
- Only 0.1 % is classified as Permanent Wet this is too little
- Ground truth = 8.5 % wetlands (+ 3.8 % peatland forest)

Inconada project https://inconada.eu/

Work package 5: Land Cover / Land Use for Environmental Monitoring

Wendy Fjellstad NIBIO (Norwegian Institute of Bioeconomy Research) Division of Survey and Statistics Department of Landscape Monitoring

wendy.fjellstad@nibio.no www.nibio.no

The research leading to these results has received funding from the Norway Grants 2014-2021 via the National Center for Research and Development

### Enhancing the user uptake of Land Cover / Land Use information derived from the integration of Copernicus services and national databases "InCoNaDa"

## HRL-WAW comparison with national data in Poland

Agata Hościło, Aneta Lewandowska, Milena Chmielewska Institute of Geodesy and Cartography

1. Work package 4: Land Cover / Land Use for agricultural sector:

Assessment of potential and accuracy of HRL-WAW for assessment of agricultural landscapes and Ecological Focus Areas (EFA):

- WAW vs national LC database (BDOT10K)
- WAW vs EFA elements

2. Work package 5: Land Cover / Land Use for Environmental Monitoring

Assessment of potential and accuracy of HRL-WAW for assessment of agricultural landscapes and Ecological Focus Areas.

In 2013, the European Commission introduced a green direct payment scheme (greening) as part of the CAP.

There are actions that farmers have to put in place:

**Maintaining permanent grassland** - the ratio of permanent grassland to agricultural land is set by EU countries at national or regional level (with a 5% margin of flexibility). Moreover, EU countries designate areas of environmentally sensitive permanent grassland. Farmers cannot plough or convert permanent grassland in these areas.

**Ecological Focus Areas (EFA)** - farmers with arable land exceeding 15 ha must ensure that at least 5% of their land is an Ecological Focus Area in order to safeguard and improve biodiversity on farms.

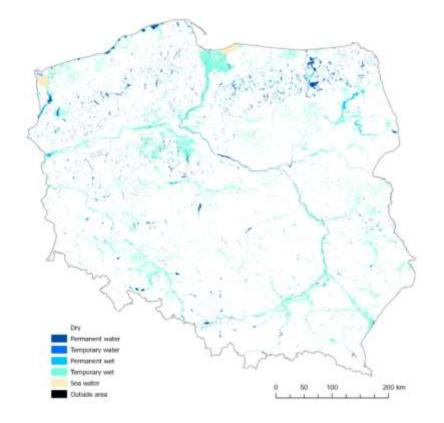

WAW\_2018\_010m\_Poland\_02180\_V10

WWPI\_2018\_010m\_Poland\_02180\_V10

WAWCL\_2018\_010m\_eu\_03035\_V1\_0 (48 tiles)

Analysis conducted at the country scale

### Topographic database (BDOT10K)

#### Water areas class:

- Rivers and streams, with the minimum width of 5 m for running or standing water,
- Lakes and ponds, with the minimum width of 5 m and minimum area of 80 m<sup>2</sup>, ponds smaller in size are included in other land cover classes.

**Sea water** – including the waters of ports defined seaward by a line connecting the furthest permanent port facilities that are an integral part of the port system.

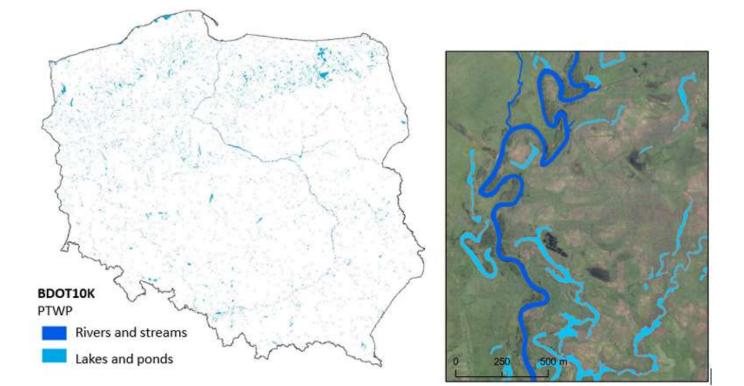

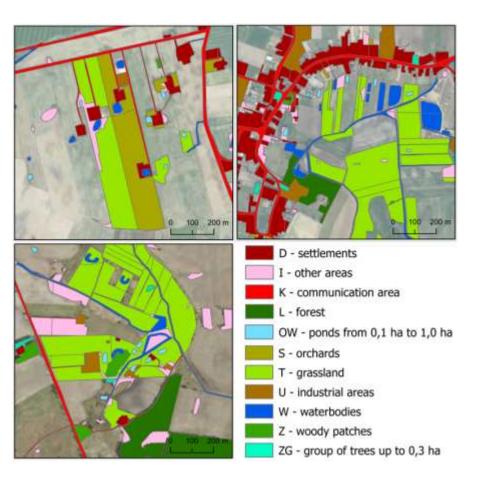

Figure 2: Visualisation of Fresh water areas (PTWP) divided into two classes: 1) rivers and streams, and 2) lakes and ponds derived from the BDOT10K database in Poland.

### National datasets

### Land Parcel Identification System (LPIS)

- LC layer called 'management fields', which contains the basic land cover classes: arable land, settlements, forest, orchards, communication area, grasslands, high value grasslands, industrial areas, waterbodies, woody patches and other areas, agroforest areas, short rotation woodlands
- Ecological Focus Areas (EFA) elements:
  group of trees up to 0.3 ha (compared vs SWF)
  - ponds less than 0.01 haponds from 0.01 ha to 0.1 haponds from 0.1 ha to 1.0 ha

- Detailed analysis of the nomenclature and definitions of the water and wetness classes in the national databases.
- Thematic accuracy:

**User accuracy**: how often the WAW class is actually present in the national dataset, i.e. the percentage distribution of each WAW class amongst the national dataset classes (where 100 % is the total area in the WAW class).

**Producer accuracy**: how often water and wetness in the national dataset is correctly shown in HRL-WAW, i.e. the percentage distribution of each national water or wetness class among the WAW classes (where 100 % is the total area in the national water or wetness class).

• Spatial accuracy

The **thematic accuracy** was assessed using the rasterised national land cover classes, whereas the **spatial accuracy** was performed using the vector format.

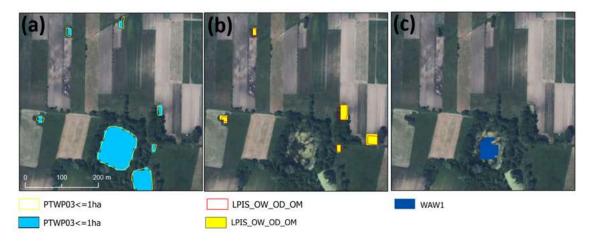

Figure 8: In Poland, the spatial overlay was done using raster data. Example of the rasterised BDOT PTWP- Water class (a), LPIS-EFA ponds (b) and HRL-WAW (c).

# WAW classes vs. BDOT Land Cover classes in Poland (total area 312 472 km<sup>2</sup>).

• WAW underestimates water area
WAW (Permanent water and Temporary
water) occupy 1.5 % (4 272 km <sup>2</sup> ) ; water
classes in BDOT cover 2 % (6 100 km <sup>2</sup> )

- 7% of Poland covered by WAW (exc. Dry cl.)
- WAW Temporary water class covers just 0.04 % of the country area (118 km<sup>2</sup>), which indicates large underestimation of this class

WAW class	%	BDOT LC class	%
Dry	92.7	Dry land	97.8
